

# Creating Climate Smart Communities.

## Bioferts training and mentoring program-2024 to 2027.

This is a great opportunity for you to participate in this 3-year training and mentoring program facilitated by Bioferts expert, Daniel Hodges from Soil, Water and Plants.

A Biofert is a fertiliser that you can make on farm from several different bases. It is a brewed product a bit like making beer and can be scaled from 20 litres to 20,000 litres and has a really stable shelf life. Bioferts use bacteria to aid in the chelation of minerals.

Best thing about Bioferts are they are fun to make and cheap! They can be modified to suite your individual farm needs.

This is an exciting opportunity but numbers are limited. If you're interested in being involved please register via the EOI ASAP.

### Program Details.

This program will run over 3 years and will include the following:

- A half day Biofert introductory farm visit session to be held on December 10th- details TBC
- Ongoing mentoring support for first year of program
- 2-day training workshop in summer 2024/25
- Three farm walks with all participants over 3 years

Participating landowners will be required to contribute \$250 for involvement in the program.

For program details and to fill out an EOI please click on the following links.  
Please submit your EOI by November 22<sup>nd</sup>.

BCLN EOI form- <https://forms.gle/arcpUgzvYpcokrQj9>
