

COLLECTING DATA ON KOALAS!

Have you seen a Koala (*Phascolarctos cinereus*) on the Bass Coast?! Gippsland Threatened Species Action Group (GTSAG) and Bass Coast Landcare Network are working on a project to protect threatened species in the local area and the first step is to identify their whereabouts! They are most commonly found around the Inverloch and Cape Paterson townships, however sometimes they can be found right up in the Bass hills. If you have seen, heard of or taken a photo of a Koala locally, please help us by sharing the following information:

KOALA OBSERVATIONS

Year:

Address:

Description of location on property:

Other observations (in tree, crossing road, dead or alive etc.):

Please screenshot a map on your phone and mark the location to attach and send to:

jye.andersen@basscoastlandcare.org.au

If you have any photos please send in also!

Thank you for contributing to protect a local threatened species!
