

Bass Coast Landcare Network Discussion Group Farm Walk- Natural Capital Accounting.

You are invited along to this exciting farm walk to learn more about Natural Capital Accounting on farms. Natural Capital Accounting methods have been developed for assessing both vegetation and soils on farm which can be turned into accounting terms that may attract future funding and trading opportunities. This farm walk will feature regenerative agriculture consultant, Declan McDonald and Karen Thomas from Melbourne Water who will talk us through the Natural Capital Accounting process and analyse the soils and vegetation benchmarking results that have been completed for our host farm, Prom Country Cheese.

Natural Capital Accounting is a great way for you to track and validate your farms ecological health, this makes it of interest to landowners who are interested in offset payment and trading schemes as well as those who are just interested in conservation and sustainable land management. This should be a fantastic day not to be missed so register quickly if you wish to join us.
