

Diversification and Innovation Discussion Group Farm Visit.

Welcome to the property of Neils and Marja Olsen. Neils is the inventor of the Soilkee Renovator which combines cultivation, mulching, aeration, and seeding into a one pass approach in the paddock. The system improves grazing systems and builds soil carbon. Neils and Marja Olsen were also the first farmers to be issued with soil carbon credits under the Australian Governments Emissions Reduction fund. Come along to this exciting day and learn more about the Soilkee and building soil carbon.
