

Wildlife Monitoring and Camera Trapping Workshop

Interested in using technology to monitor wildlife on your property?

Come along to a field day exploring different techniques and technologies available to undertake wildlife monitoring.

This workshop is part of the Powlett Project 'Protecting the Powlett, creating habitat for threatened species' funded by the Victorian State Government Community Volunteer Grants. This workshop is also supported by the Victorian Government Community Skills Development Program.

Jye Andersen from BCLN will be presenting on the results of BCLN's camera trapping program and how to install and best utilize infra-red camera traps on your property.

Long Nose Bandicoot

Koala
